

Integrating Property Loss Control into Existing Training Programs

A Web-Based
Loss Control Seminar for
Ohio School Plan Members
November 12, 2009

Webinar Objective

A quality property loss control program is a key component of any risk management program. The development and implementation of a property loss control program is not an easy task. It takes time, resources and expertise.

Most organizations do a good job at training personnel on safety and health hazards. But what about property hazards?

Training employees in property hazards can reduce property or business income loss and limit disruption in facility operations.

Webinar Agenda

Attendees will learn how to identify physical risks that could result in a liability claim

This workshop focuses on the critical property elements that can be integrated into an organizations existing training program.

- Who should be trained?
- Understanding Roles and Responsibilities
- Common property losses
- Fire Protection
- Preventative Checklists and Recommendations

Participants will receive handouts, checklist and guidelines for developing a property program.

Presenter

Brent Escoubas is an Alliant Senior Loss Control Consultant and has over 15 years of technical and field experience as a fire protection and safety consultant. He has taught many classes in fire protection, risk control and safety compliance. Brent is a member of the American Society of Safety Engineers and is a Certified Safety Professional.

About the Webinar

This is an audio-plus-web format that enables participants to receive this training without leaving their facility. Since the program is delivered live, participants are able to send questions to the presenter via instant messagin
